Vibration protection gives undisturbed music experience

Ground it E is a stable and height-adjustable platform for turntables, that will reduce negative effects of potential surface vibrations significantly. The use of Ground it E is very simple: Do not place your turntable directly on surfaces such as furniture or shelves that may be vibration sensitive, but place it on Ground it equipment bases. All Ground it bases will improve the sonic performance, so a pleasant, natural reproduction of vinyl music will be possible. The playback quality of a turntable placed on Ground it E will benefit because of improved dynamics and coherent timing. The ambient acoustic of the recording venue will sound much clearer and contoured, so music playback appears to be more realistic, authentic and expressive.

Example of use: Pro-Ject RPM3 carbon
